THE 180° AI-PERSONAL SAFETY CAMERA

INTELLIGENT. VISIONARY.

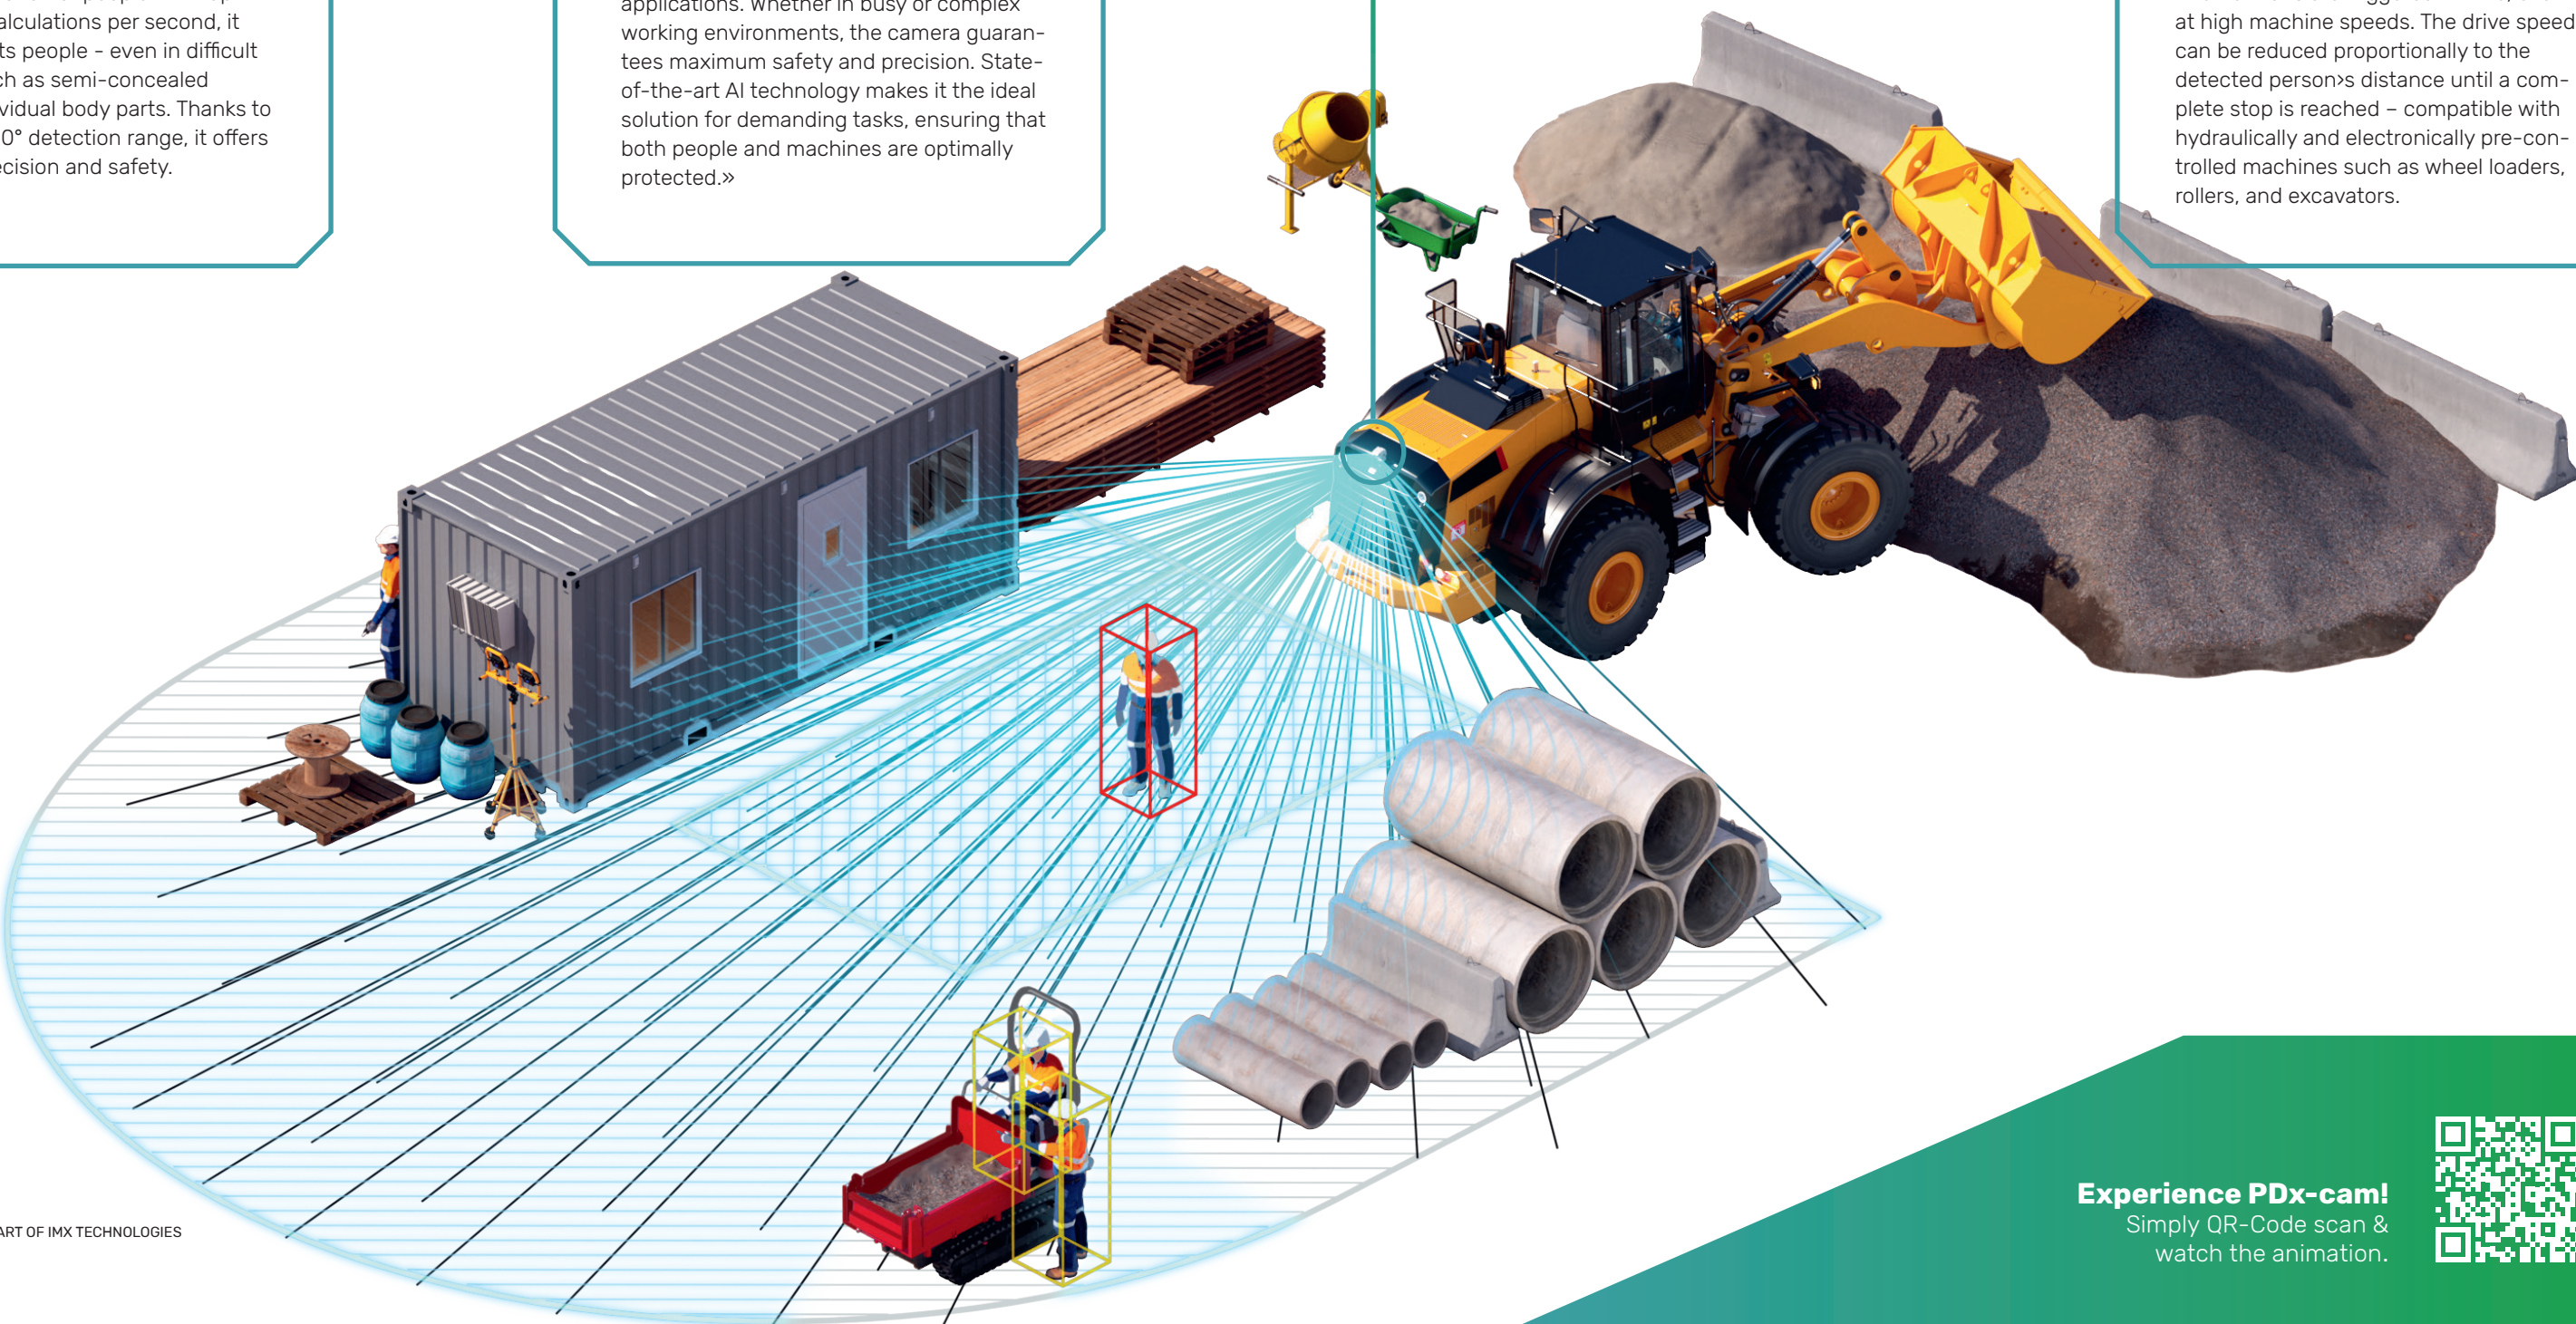

The PDx-CAM-180° was specially developed for detection of people. With up to 31 trillion calculations per second, it reliably detects people - even in difficult situations such as semi-concealed bodies or individual body parts. Thanks to the unique 180° detection range, it offers maximum precision and safety.

SAFETY AND RELIABILITY IN EVERY SITUATION

«The PDx-CAM 180° is characterized by its high reliability across a wide range of applications. Whether in busy or complex working environments, the camera guarantees maximum safety and precision. State-of-the-art AI technology makes it the ideal solution for demanding tasks, ensuring that both people and machines are optimally protected.»

EFFICIENT

With a range of 15 meters, the PDx-CAM-180° ensures that warnings or interventions are triggered in time, even at high machine speeds. The drive speed can be reduced proportionally to the detected person's distance until a complete stop is reached - compatible with hydraulically and electronically pre-controlled machines such as wheel loaders, rollers, and excavators.
